

SpaceSync

Space Updates Just Got Faster and Easier

SpaceSync is an optional feature that allows you to get space data into AiM quickly and easily. Data is loaded from a standard Excel spreadsheet format, allowing intuitive and easy data updates. All standard AiM validation is applied before data updates are posted, removing any worries about bad data getting into the system.

Key Benefits

- Create or update space data in AiM quickly and easily using standard AiM screens
- Data is read in from standard Excel spreadsheets
- Update or add new locations en masse
- Maintain the standards and integrity of all of your space data
- Space updates include: location data, occupancy, grants, programs, and occupants
- User-defined field values are supported for locations and occupancy, allowing updates to custom data elements tracked within AiM

Solving Your Space Data Problems

- A set of **purpose-built screens inside AiM** that allow exporting, importing, and reviewing space data changes.
- **Standard spreadsheet (Excel) format** supported for both importing and exporting.
- **All standard AiM validation is applied** before updates are posted removing **any worries about bad data** getting into the system.
- Reviewer has the ability to **approve or reject all data** changes before they are applied.

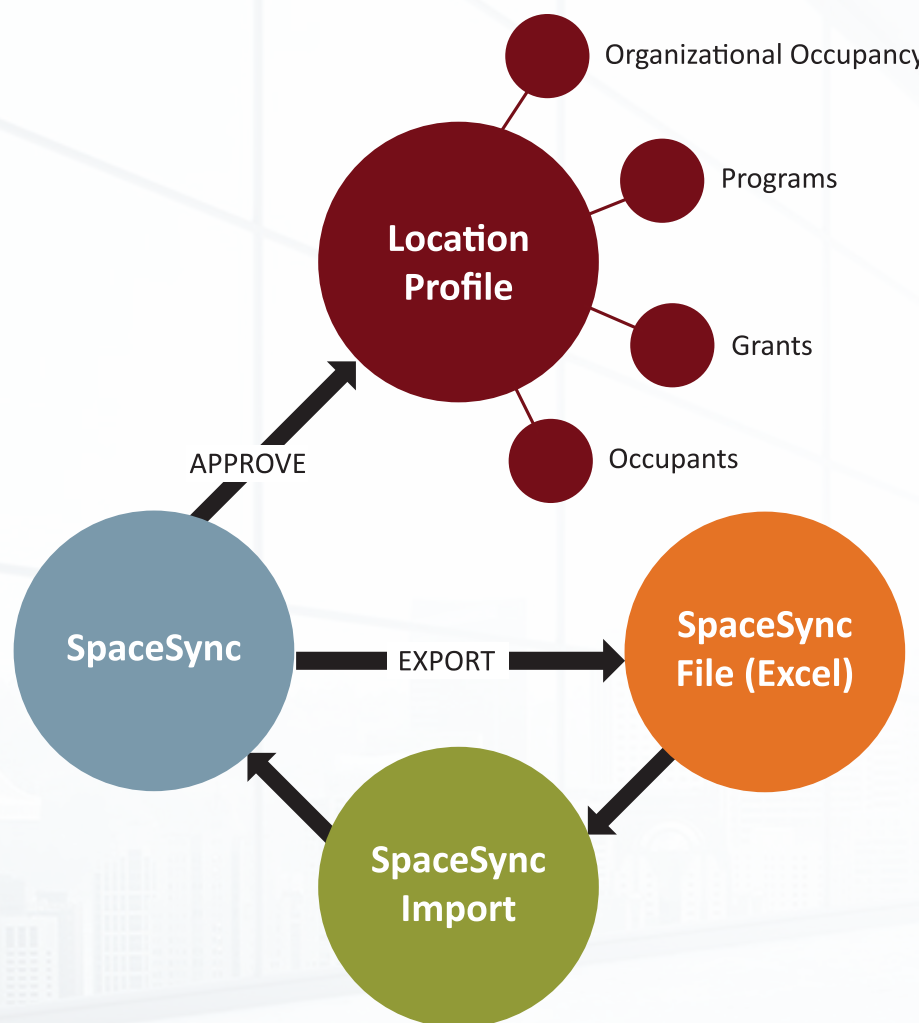

SpaceSync

A Unique Approach

Purpose-built screens inside AiM alleviate the need for any custom-build interfaces to load and update space data

How It Works

- **SpaceSync Import** imports space data in a standard, pre-defined Excel format
- **SpaceSync** allows review, approval/rejection, and export of space data

SpaceSync

SpaceSync Import

ID	Status	Description
1044	Processed	Tucson updates - 2020 Q1

Importing can be used to create one or more SpaceSync records from an Excel file with space data in the pre-defined format.

Contains separate tabs for location, occupancy, programs, grants, and occupants data, as well as user-defined fields data for locations and occupancy.

SpaceSync

ID	Status	Description
1058	Pending	Tucson updates - 2020 Q1

Records allow processing updates to existing locations, as well as creating new locations, with all their associated space data.

Integral To:

- **Real Estate & Property Management** - Locations can be created and updated
- **Space Management** - Space occupancy, grants, and programs can be added and updated
- **Property Managers** - Location and space data can be loaded and kept up-to-date easily

Why AssetWorks

A leader in Integrated Workplace Management Software (IWMS), AssetWorks provides a single, unified platform for all of your facility management needs. A veteran team with 25+ years of domain experience, we are dedicated to continued innovation and constantly listening to your feedback and ideas for improving our current products. At AssetWorks, we're more than just an IWMS solution; we're a family dedicated to the successful management of your organization or community.
