

Facilities Managers focused on Access Controls should consider using AiM's Key and Access Control module. AiM helps shop personnel track access locations, cores, locks and keys (to include key copies and rings) and helps reduce the fear of rogue keys by taking control of the release/return process. Campus Security officials concerned with the over authorization of access would benefit from AiM's Key and Access Control software. Knowing exactly what space is opened before keys are released is essential for effective control. Integration with our Space Management system allows graphical, floor-plan style reports that can quickly allow the proper decisions to be made.

Your Challenges

- Your inability to provide the appropriate key/access card(s) can potentially result in the over-authorization of space
- Information silos and manual systems are susceptible to damage and the loss of important security data
- Rogue keys open your organization up to the risk of unwanted space access and potential loss of property (or worse)

What's in it for you?

- Shop personnel can track access locations, cores, locks and keys, including key copies and rings—reduces the likelihood of rogue keys by taking control of the release/return process
- Security personnel know exactly what space is opened before keys are released, which increases control and keeps over-authorization in check
- Integration with Space Management provides graphical, floorplan-style reports that aid in decision support

What You Get

- Key Requests
- Key Issue/Return Management
- Key Core and Access Point Management
- Key Ring Tracking
- Integrated to Real Estate and Property Management
- Integrated to Space Management
- Reporting

DATASHEET

Key and Access Control

As part of a broader Integrated Workplace Management System (IWMS), Key and Access Control is seamlessly integrated with an extensive range of facilities management tools under a single, unified software platform.

The five pillars of AiM IWMS:

- Real Estate and Property Management
- Space Management
- Operations and Maintenance
- Capital Planning and Project Management
- Energy Management
