

AiMCAD provides the ability to link floor plan drawings in AutoDesk AutoCAD to the associated facilities in the AiM database. This bi-directional link allows data from floor plan drawings to be exported to AiM to ensure accurate room counts and area calculations, as well as data from AiM to be imported into your floor plan drawings to generate more accurate graphical reports.

Key Features

- Export accurate locations and areas to AiM
- Generate high-quality graphic reports in seconds
- Composite reports
- Building stack diagrams
- Automatically create graphic reports by coloring, hatching, annotating, or any combination
- Modify floor plans using standard AutoCAD commands and update the database automatically
- Access space information in the database by simply clicking the desired room or space
- Area calculations comply with FICM, IFMA, BOMA, or any other institutional standards
- Fully customizable to your organization's existing drawing and layering standards
- Built-in error checking of area boundaries, space identifiers, and area calculations

Composite Report Example

As part of a broader Integrated Workplace Management System (IWMS), AiM is seamlessly integrated with an extensive range of facilities management tools under a single, unified software platform.

The five pillars of AiM IWMS:

- Real Estate and Property Management
- Space Management
- Operations and Maintenance
- Capital Planning and Project Management
- Energy Management
