

Go Inventory

Mobility is Life

Go Inventory compliments and extends the back office asset management capabilities of AiM by providing real time processing of pick tickets, counter releases, returns, physical counting and management of inventory parts.

Solve Problems

- No automated way to tell customers that parts are ready to be picked up
- Physical counting is a manual laborious process
- Signature handoff is all paper-based and is stored in huge filing cabinets
- The process of requesting, picking, and releasing parts is a manual paper-intensive process
- All bin and part data must be transposed from handwritten notes when updates are needed

Key Benefits

- Connectivity directly into your AiM system improves real-time data access.
- Full mobile access to request, release and return items to the warehouse.
- Reduce paperwork and improve accuracy
- Improve operational efficiencies

A Unique Approach

Go Inventory links directly to Go Work Management and other Go Mobile applications to manage the inventory and parts to get the job done. Completely integrated with AiM, Go Inventory has the ability to count, pick, release and return inventory.

Integral To:

Mobile Productivity

Go Inventory

How It Works

What You Get

Go Inventory
Detailed pick tickets enable the warehouse personnel to review and act on work order inventory
Parts and Inventory can be released or returned quickly with barcode scanning
Easily manage and count shop inventory within the app

Why AssetWorks

A leader in Integrated Workplace Management Software (IWMS), AssetWorks provides a single, unified platform for all of your facility management needs. A veteran team with 25+ years of domain experience, we are dedicated to continued innovation and constantly listening to your feedback and ideas for improving our current products. At AssetWorks, we're more than just an IWMS solution; we're a family dedicated to the successful management of your campus or community.
