

## Go Work Management

### Mobility is Life

Go Work Management provides real-time, secure access to AiM Work Management data for field users via an application optimized specifically for iOS devices. Maintenance and operations crew will have valuable information in the field at their fingertips.

### Solve Problems

- Field technicians are spending less time in the field where they do the most good
- Arcane paper processes waste time and adversely affect productivity and hurt the bottom line
- Your work force is spread out over a large, geographically-dispersed area

### Key Benefits

- Connectivity directly into your AiM system improves real-time data sharing.
- Quick and easy access to daily assignments
- Real-time creation of time entries by activity and user via embedded stopwatch
- Reduce paperwork and improve accuracy
- Request and record material usage
- Improve operational efficiencies and reduce rework

### A Unique Approach

Application deployment via either Apple's App Store or your Mobile Device Management Software.

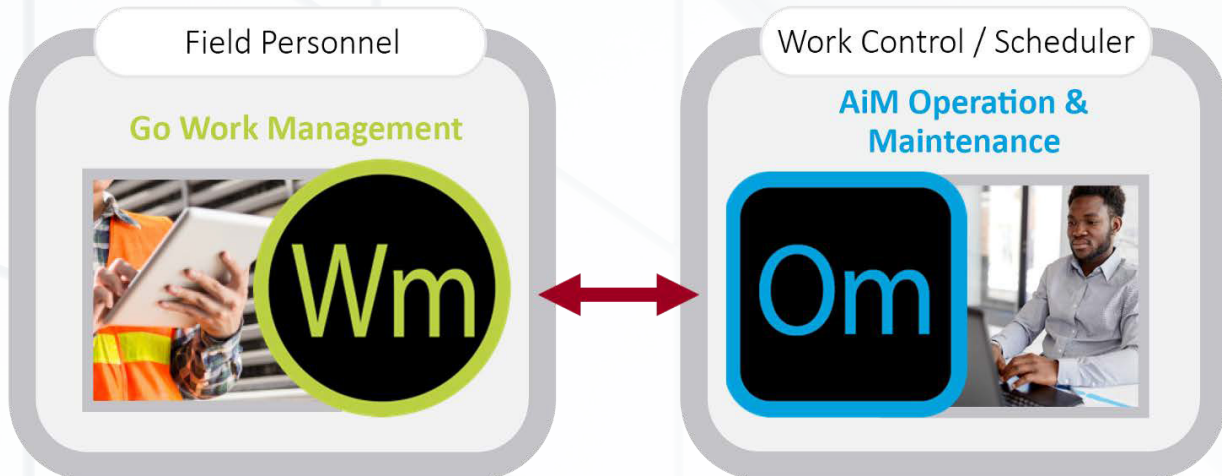

### How It Works

Go Work Management integrates with the AiM Operations & Maintenance license to connect your mobile maintenance field technicians with the central hub of your operations. From an iOS device the technician is able to view daily assignments, manage work done on phases, enter follow-up work requests, enter time cards, request inventory and track use of shop stock.

# Go Work Management

## How It Works

## What You Get

Go Work Management
User interface designed and optimized specifically for iOS mobile devices that allows for quick, easy access to work orders
Mobile access to view and act on daily assignments and open phases of work orders.
Request inventory, track time on phases and work orders.
Secure access to AiM via Wi-Fi or carrier network using AiM credentials or SSO.
