

Locate™ : Map-Centric Asset Management

Locate embeds the power of Esri's ArcGIS mapping software into FacilityForce for map-centric asset management. Rather than viewing a simple list of data, Locate brings your data to life by displaying assets, work orders and more on interactive maps that allow you to show or hide layers, zoom in and out, select multiple assets, view detailed information about the assets, and perform actions on those assets.

Where Locate Excels:

Map-Centric Asset Management

Locate brings your data to life visually by displaying facilities, assets, work orders and more on interactive maps that allow you to show/hide layers, zoom in and out, select multiple assets, view detailed information about the assets, and perform actions on those assets.

Visualize Spatial Relationships

Nothing helps you understand spatial relationships and the proximity of things better than seeing them on a map. With the power of Esri embedded in FacilityForce, you can visualize your facilities, assets, work orders and more to get insightful answers to your questions about "where".

Build Upon Your ArcGIS Data

Locate connects FacilityForce with your Esri database(s) to extend and add value to the asset data you already have in ArcGIS.

Locate Benefits:

- Map-Centric Interface
- Enable Location Intelligence
- Discern Proximity of Facilities & Assets
- Visualize Spatial Relationships
- Manage Horizontal Assets
- Leverage Data in Esri's ArcGIS
- Esri's Industry Leading GIS Technology
