

Operate's AssetSync

More Asset Data, Better Asset Data, Faster Asset Data

AssetSync is a feature that allows you to get asset data into Operate / AiM quickly and easily. Data is loaded from a standard Excel spreadsheet format, allowing intuitive and easy data updates. All standard system validations are applied before data updates are posted, removing any worries about bad data getting into the system.

Key Benefits

- Create or update asset data in Operate / AiM quickly and easily using standard system screens.
- Data is imported from standard Excel spreadsheets.
- Add assets to PM templates or Capital Projects en masse.
- Over 100 data elements are supported, including asset children, accounts, and locations served.

Problems Solved

- A set of purpose-built screens inside Operate / AiM that allow exporting, importing, and reviewing asset data changes.
- Standard spreadsheet (Excel) format supported for both importing and exporting.
- All standard system validations are applied when posting updates, removing any concerns about invalid data being applied to Operate / AiM records.

What You Get

- Export asset data with Excel
- Import asset data from Excel
- Review / Approval of imported records before applying updates

Integral To

- Asset Management
- Preventative Maintenance
- Capital Projects
- Asset Managers

Operate's AssetSync

A Unique Approach

Purpose-built screens inside Operate / AiM alleviate the need for any custom-built interfaces to load and update asset data.

How it Works

Who is FacilityForce?

Created specifically to address the facilities & asset management challenges that government organizations face today, FacilityForce was carved out of AssetWorks Facilities, a software developer with a rich history dating back to 1991 (30+ years ago).
