

Perform Mobile Productivity

Mobile Productivity for Field Staff

Achieve a quantum leap in efficiency by equipping your field personnel with direct access to your AiM / Operate facility and asset management system (IWMS Software) via the Perform family of mobile apps.

These purpose-built apps provide precisely what each mobile worker needs to perform their job and keep the AiM / Operate system up-to-date in real-time – from field technicians executing on work orders, to inspectors making their rounds, to warehouse workers handling parts and more.

The FacilityForce Mobile Productivity Solution enables your team to manage the entire lifecycle of assets from mobile devices in the field.

Problems Solved

- Direct access to verify, update, and insert asset data using mobile devices in the field means a more accurate and complete asset inventory.
- Ensure your asset data conforms to your taxonomy standards by using AssetSync to validate, import, and update asset information.

Key Benefits

- Give field personnel direct access to AiM / Operate from mobile devices.
- Easily update asset attribute and condition assessment data in the field on the go.
- Maintain the standards and integrity of all of your asset data.
- Unburden and empower your employees.
- Improve operational efficiencies and reduce administrative costs.

Field personnel can directly access and update AiM / Operate to eliminate unnecessary paperwork, repeat trips to the job site, costly time delays, and redundant data entry.

Streamline warehouse operations and modernize inventory management by using the Perform mobile apps and QR / barcode scanning to request parts, get approval, receive orders, issue inventory, and more.

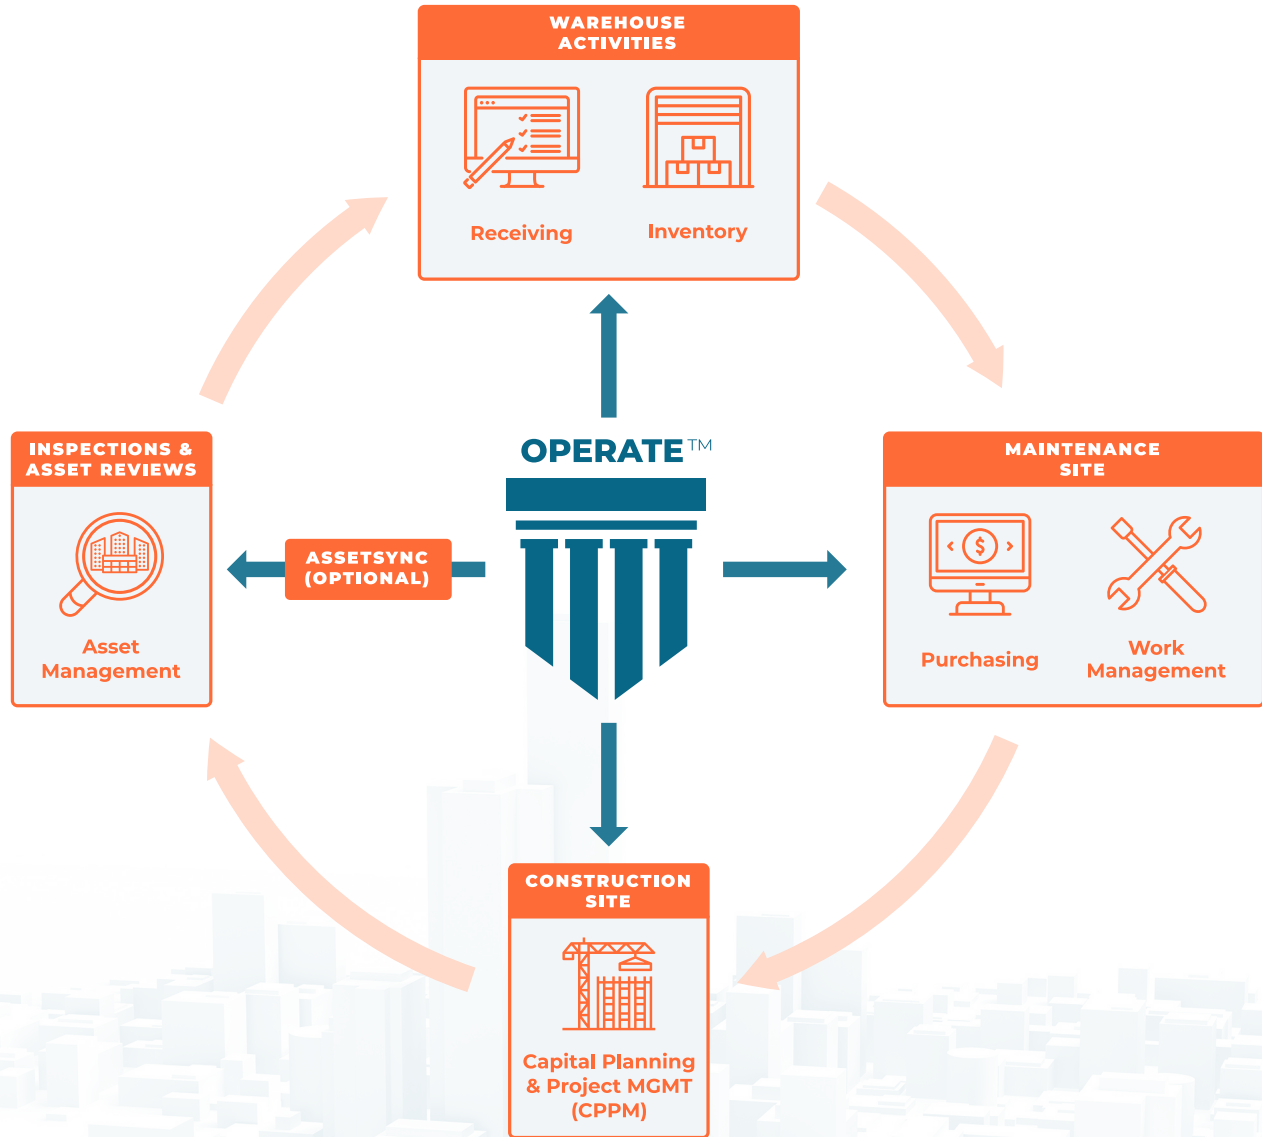

With Capital Planning & Project Management (CPPM) in AiM / Operate, and the Perform CPPM mobile app, project managers can perform building and safety inspections electronically in the field, collecting data and photos to pass / fail line items and trigger actions when necessary.

Perform Mobile Productivity

A Unique Approach

The Perform Mobile Productivity suite puts the power of AiM / Operate in the hands of your field personnel (e.g., field technician, inspector, project manager, warehouse worker, and more) with role-specific apps focused on each person’s tasks. This Perform family of mobile apps is designed to run on Apple iOS devices, including iPhones and iPads.

PERFORM™

Perform is a family of mobile apps that empowers your field personnel and technicians to be more productive on-the-go, wherever they need to be.

- INTEGRAL TO:**
- Operations & Maintenance
 - Field Service Operations
 - Warehouse Management
 - Inspections & Meter Readings
 - Capital Projects

Perform Mobile Productivity

Modules Included:

Work

- User interface designed and optimized specifically for iOS mobile devices that allows for quick, easy access to Work Orders.
- Mobile access to view and act on daily assignments and open phases of work orders.
- Request inventory, track time on phases and work orders.
- Secure access to AiM / Operate via Wi-Fi or carrier network using AiM / Operate credentials or SSO.

Inventory

- Detailed pick tickets enable the warehouse personnel to review and act on work order inventory.
- Parts and inventory can be released or returned quickly with barcode scanning.
- Easily manage and count shop inventory within the app.

Capital Improvement

- Track and act on field issues.
- Mobile access to view project information in the field.
- Connect and contact key contacts via text, email, or phone.
- Perform project-based field and safety inspections.
- Easily collect project notes, descriptions, photos and more directly in the mobile app.

Asset Management

- Mobile access to all your asset information including related parts.
- Easily assess, inspect, and verify assets.
- Update asset records in the field including utility meters.
- Connect with inventory to add parts to an asset.

Material Receiving

- Access vendor complete data to review PO's and receive inventory.
- Easily search by purchase order name, part name, or scan via barcode.
- Disperse and reverse disperse parts related to phases and work orders.

Material Requests

- Mobile access to request, purchase and approve parts for work orders.
- Receive audio and banner style status notifications for inventory and actions.
- Monitor and track request activity.

AssetSync

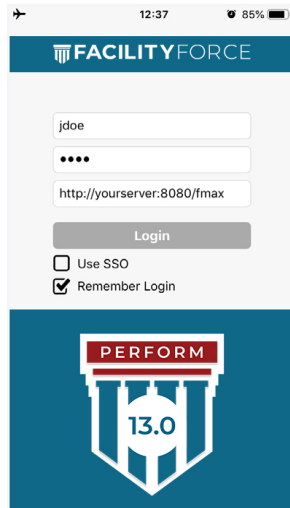

- Import and export asset data with Excel.
- Review of imported records before applying updates.

Perform Mobile Productivity

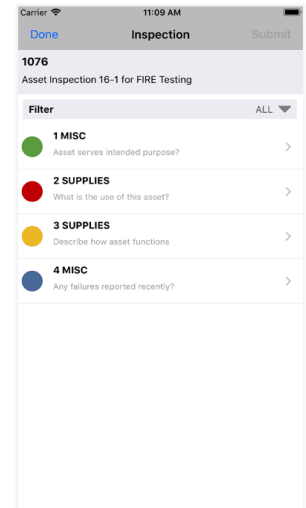

Login with Operate credentials or SSO

Access the information securely from any iOS device.

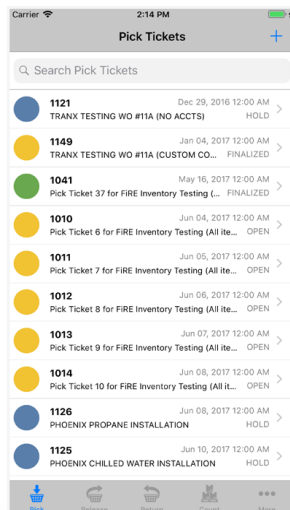

Inspect each phase of the project

Inspect and collect project information in the field.

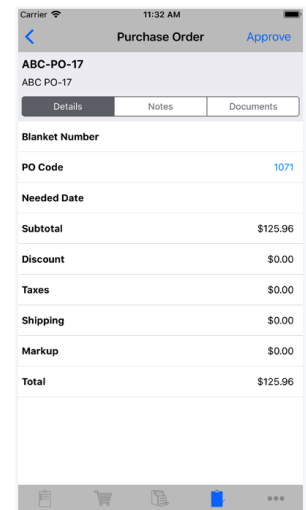

Complete overview of inventory tickets

Filter, sort, notify, and act on inventory needs.

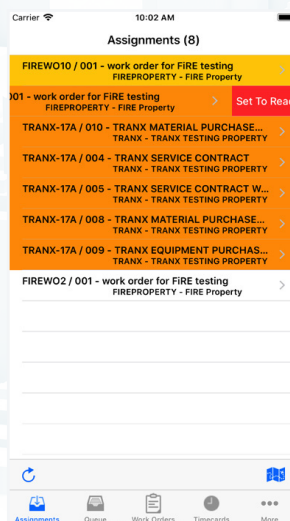

Mobile friendly purchase orders

Order the parts and supplies you need, when you need them.

Daily assignments viewed & sorted

Easier than ever, daily assignments can be pushed to the field technicians any time of day.

Quickly view the phases in the queue

Open phases for all open work orders can be viewed to help techs manage their daily and weekly work.
