

Operate's SpaceSync

Space Updates Just Got Faster and Easier

SpaceSync is an optional feature that allows you to get space data into Operate / AiM quickly and easily. Data is loaded from a standard Excel spreadsheet format, allowing intuitive and easy data updates. All standard system validations are applied before data updates are posted, removing any concern about bad data getting into the system.

Key Benefits

- Create or update space data in Operate / AiM quickly and easily using standard system screens.
- Data is imported from standard Excel spreadsheets.
- Update or add new locations en masse.
- Maintain the standards and integrity of all of your space data.
- Space updates include: location data, occupancy, grants, programs, and occupants.
- User-defined field values are supported for locations and occupancy, allowing updates to custom data elements tracked within Operate / AiM.

Problems Solved

- Purpose-built screens inside Operate / AiM allow exporting, importing, and reviewing space data changes.
- Standard spreadsheet (Excel) format supported for both importing and exporting.
- All standard system validations are applied before updates are posted, removing any concern about bad data getting into the system.
- Reviewer can approve or reject all data changes before they are applied.

A Unique Approach

Purpose-built screens inside Operate / AiM alleviate the need for any custom-built interfaces to load and update space data.

- SpaceSync imports space data in a standard, pre-defined Excel format.
- SpaceSync allows review, approval / rejection, and export of space data.
